

## Give your car a shine with car wax

Waxing your car is as important as cleaning it. A car wash only provides a temporary sparkling look while it is a [car wax](#) that actually defends the car paint from the harmful environmental factors. Always remember to wash and dry your car before applying any kind of wax. There are a multiple of reasons to park your car away from the extreme weather because direct sunrays and a strong current of wind will wipe off the layers of applied wax before you could even relish the results.

### The Steps

Use a damp wax sponge by applying a large coin sized wax in small circles. Repeat the process often and remember where you originally started from? Be careful when applying wax near the joints of car doors and hood as the accumulating wax can harm the levers. The next step is to wipe off the wax by a clean cotton cloth. While cleaning, you will notice that the wax will gradually build up on the cleaning cloth. Therefore, shake the cloth as often as possible. After cleaning, take a closer look and you might notice very small round stains. You must get rid of the remaining residual wax. The third and the final step is to take another piece of clothing and clean the entire surface of the vehicle to reveal a brand new version of the car you bought.
